#### Protective equipment

#### Appropriate engineering controls

Provide adequate ventilation. Mechanical ventilation or local exhaust ventilation may be required. Ensure operatives are trained to minimise exposure.

#### Personal protection

Unprotected persons should be kept away from treated areas.

#### Eye/face protection

The following protection should be worn: Wear eye protection. Tight-fitting safety glasses. Full face visor or shield. Workers should not contact their eyes or skin with hands contaminated with the material.

#### Hand protection

To protect hands from chemicals, gloves should comply with European Standards EN388 and 374. As a general principle, exposure should be managed by means other than the provision of protective gloves. Manufacturers' performance data suggest that the optimum glove for use should be: Nitrile rubber. Thickness:  $\geq 0.3$  mm Neoprene. Thickness:  $\geq 0.4$  mm or Butyl rubber. Thickness:  $\geq 0.3$  mm Permeation breakthrough time according to EN374 - class: (1-6) e.g. minimum 480 mins. Caution: The performance of gloves under actual working conditions can be significantly affected by many factors and the information provided according to EN374 may not accord with what is achieved in practice. We recommend that expert professional advice is sought that takes into account of the work processes and working environment applicable for each task where gloves are to be worn.

#### Other skin and body protection

Wear suitable protective clothing as protection against splashing or contamination.

#### Hygiene measures

Wash at the end of each work shift and before eating, smoking and using the toilet.

#### Respiratory protection

If ventilation is inadequate, suitable respiratory protection must be worn. Full face mask respirators with replaceable filter cartridges should comply with European Standard EN136. Half mask and quarter mask respirators with replaceable filter cartridges should comply with European Standard EN140.
